

PETROLYMPIC

CORPORATE FACT SHEET 2021

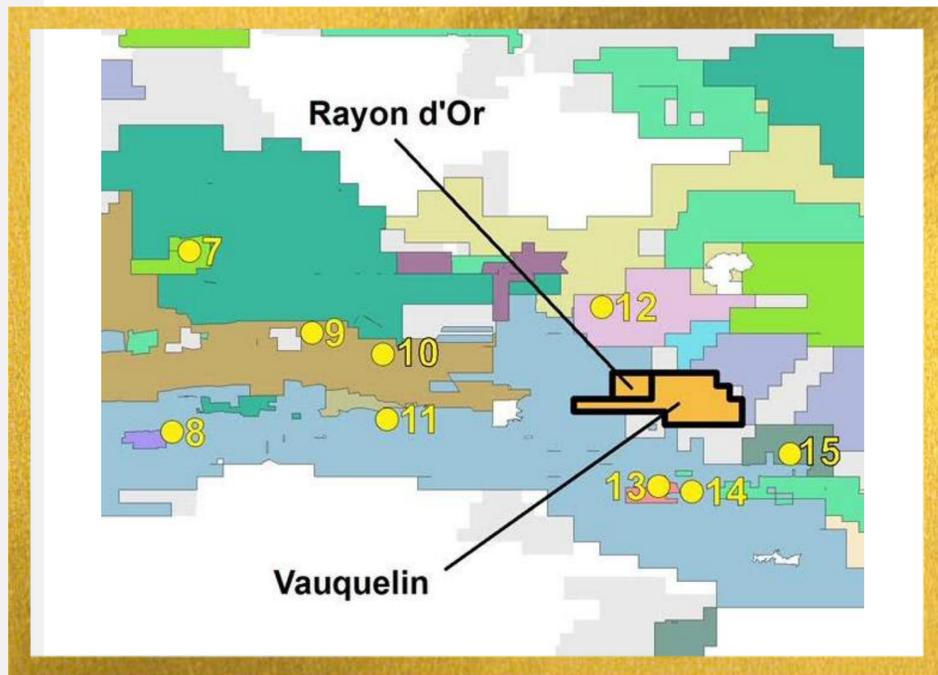

Canada's most promising
gold mining investment.

PETROLYMPIC Ltd. is a Junior Canadian gold mining and oil and gas company actively exploring for gold, and premium light crude oil and natural gas in North America. The Company is presently focused on its gold exploration assets at Vauquelin and Rayon d'Or in the Val d'Or region in the Province of Quebec, Canada. The Company also holds natural gas assets in the Gaspé Peninsula and Utica Fairway of Quebec and an 8,000+ acre asset in the oil-prolific Maverick Basin of Texas, USA.

We focus on favourable geology, systematic exploration, accessible infrastructure and experienced management.

ACQUISITION OF STRATEGIC LAND POSITIONS | DILIGENT EXPLORATION PROGRAMS | EFFECTIVE COMMUNICATIONS

CURRENT DEVELOPMENTS

Vauquelin & Rayon d'Or Sites VAL D'OR, QUEBEC

Vauquelin is located within a very favourable geological and structural environment already hosting several gold-bearing zones and gold mines in the prolific gold mining belt of Val d'Or, Quebec. A series of electromagnetic anomalies are scattered throughout the central part of the Property indicating the possible presence of prospective mineralized zones..

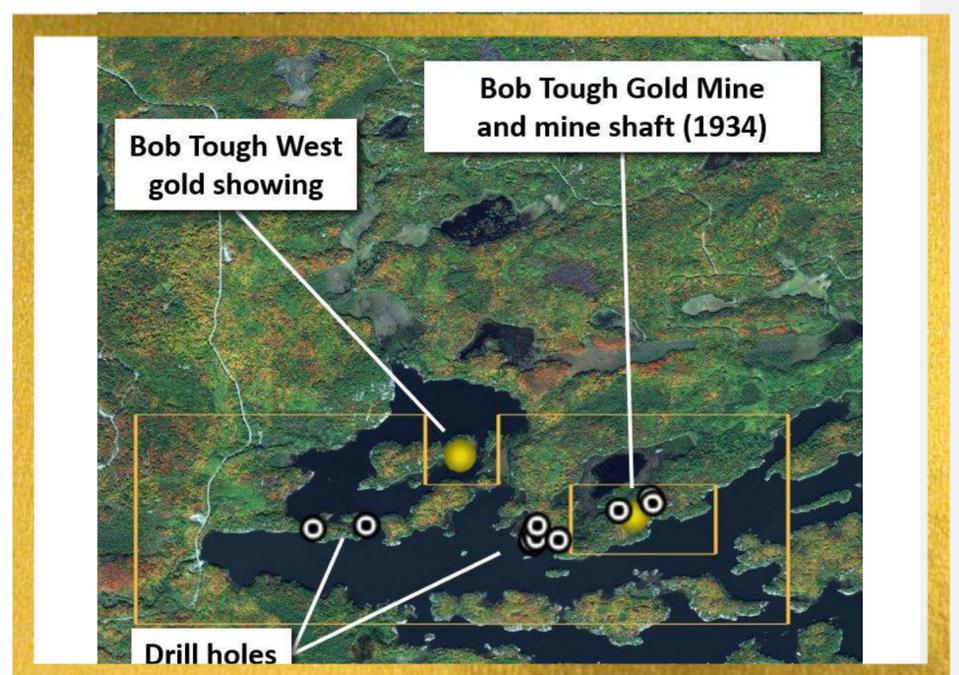

The Rayon d'Or Property is located within a very favourable metallogenic environment hosting several gold mineralized structures, deposits and past producers. The presence of gold (Au), silver (Ag), copper (Cu) and zinc (Zn) geochemistry soil 'B' Horizon, several Induced Polarization (IP-Resistivity) anomalous zones and axes, as well as two gold mineralized zones intersected by drilling confirm the favourable potential of the Rayon d'Or Property.

Evangeline Lake Property SUDBURY, ONTARIO

The Evangeline property is situated in McKinnon Township in the Sudbury Mining District. The claims are located approximately 20 km southwest of Espanola on the north shore of Evangeline Lake.

The property lies within a belt of Huronian metasediments which strikes east-west for a distance of 53 kilometers. Numerous gold occurrences are found within this belt adjacent to the Charlton Lake Fault in association with diabase dykes. Several old gold and silver producing mines exist within this metasedimentary belt.

Previous surveys outlined numerous EW trending conductors and magnetic anomalies. An exploration program including geological and geophysical surveys is necessary to generate targets for more detailed exploration works.
